Spike - Studio Artemide

Artemide recently illuminated Faeda's new headquarters in Montorso Vicentino. For this project, **recessed Sharp** and the **A.Sharpping System** were used for the offices and corridors, and **Spike** for the façade. The Sharp system ensures high uniformity of illuminance and full control of the light emission, while Spike, with its high-performance LED sources, illuminates the façade by creating plays of light thanks to its metal fringe structure. With these advanced solutions, Artemide has created a functional and aesthetic working environment that reflects Faeda's values and innovation.
