

Artemide lights up Caffè Triennale

Artemide once again renews its collaboration with Triennale Milano, a prestigious cultural institution and a point of reference for Milan as international symbol of design. It does so by illuminating the spaces of the renovated Caffè Triennale with products that bear witness to innovation and Made in Italy, sustainability and dialogue with architecture and nature.

A series of **Gople**, handmade glass suspensions designed by **BIG**, illuminate the tables of the café. These have been combined with RWB versions which, thanks to an innovative technology that is able to nourish nature by supporting its growth with the right wavelength, illuminates the numerous green spaces.

Alphabet of Light, by BIG, emphasizes the architecture with continuous lines of diffused and comfortable light that follow it, modulating on it thanks to the flexibility of the patented system.

The result is a comfortable and dynamic environment, in which the lighting scenarios can be simply modified with Artemide App, not only to follow the daily rhythms of the activities, but also to create the right frame for the temporary installations dedicated to sustainability that will be hosted in the spaces of Caffè Triennale.
